

New EFOY-Mastervolt Energy Systems

In response to the increasing demand for the use of EFOY COMFORT fuel cells in combination with a Mastervolt system, Mastervolt and SFC Energy developed two systems for recreational purposes – The EFOY-Mastervolt Basic System and the EFOY-Mastervolt Advanced System.

The benefits of this type of integrated system are:

- › Overview of power generation, usage and remaining charge
- › Optimisation of solar panel and fuel cell usage
- › Noise- and emission-free system
- › Makes longer trips possible

The EFOY-Mastervolt Basic System consists of

- **1 Mass Combi 12/2000W-100A (charger/inverter)**
- **1 Gel-Battery 12V/200Ah**
- **1 monitoring system**
- **1 EFOY COMFORT 140 fuel cell**

With a M10 fuel cartridge, the Basic System can be autonomous for months in summertime and for at least weeks in wintertime.

The EFOY-Mastervolt Advanced System consists of

- **1 Mass Combi 12/2000W-100A (charger/inverter)**
- **MLI Ultra 12V/5000 Wh lithium ion (LiFePO4) battery**
- **1 monitoring system**
- **1 EFOY COMFORT 210 fuel cell**

Particularly when used to power high energy users, such as a refrigerator, the system's combination of a lithium ion battery and EFOY COMFORT 210 fuel cell offers increased power output and capacity.

The EFOY-Mastervolt Cable

Thanks to the intelligent EFOY-Mastervolt cable the Mastervolt system ensures an optimal control of the EFOY COMFORT.
